

By Jason Bruno

Last year we reviewed the Air Force One DFX Tour Black Driver, and surprisingly it held up to many of the leading \$500 drivers in the industry when it came to performance (considering the AFO DFX driver is half the cost, it's performance results were a revelation). So this Spring we decided to give the new iron line an audition.

AFX Pro Series irons are the latest product from the company that has moved on from it's

previous Powerbilt branding. Powerbilt as a brand has long been associated with the equipment of yesteryear (mainly persimmon woods). The move was made to put the Air Force One nameplate on its own - as one that's seen for highly innovative technology. The AFX Pro Series irons are designed with the mid/lower handicap player in mind, featuring performance with forgiveness built in. The 5 thru PW are a conventional cavity back designed for feel and and shot making. The 3 & 4 irons are a hollow design charged with nitrogen for max distance and launch.

The nitrogen cartridge outlet is visible on the outer toe of the 3 & 4 iron. For those who prefer long irons to hybrids, the AFX Pro Series 3 & 4 iron boast lofts of 18 and 21 degrees respectively. No hybrids required here.

3 & 4 iron - Nitrogen Charged Features:

- 2 Piece Hollow Core Construction

- Nitrogen Charged

- Edge to Edge Sweet Spot

- Weightless Face Support

- Nitrogen Pressurized Clubhead

- Progressive Offset

- Thinner Top Line
