Indi STINGRAY TT SCOOPBACK Wedge

About Indi Golf

Indi Golf was the dream of three good friends who love the sport of golf, and were lucky enough to have accomplished careers designing, engineering,

and selling golf products. With a deep desire to grow the game by bringing its

enjoyment to all. Every individual brings their own passion to the sport in their

own way, and it's their goal to provide high quality products that will enable

golfers to perform and always enjoy the game.

StingRay wedges are engineered with TractionFace technology, which uses a proprietary open square groove shape and pattern to create tremendous

backspin and optimal launch conditions. These aggressive box grooves

increase spin by 50% and are so effective that standard StingRay wedge

(image below) exceeds the performance limits outlined in the USGA Rules

of Golf (making them non-conforming), but ideal for recreational golfers

seeking tour player like spin.

For competitive players - StingRay TT remixes TractionFace technology with another revolutionary groove shape and pattern to optimize launch and

increase backspin by 20% on a full swing.

StingRay TT Conforms to the

**Rules
of Golf**

The Scoopback design creates maximum forgiveness by moving mass to the perimeter of the clubhead. The design also features a wide sole and a wide face, which helps to reduce spin and increase distance. The Scoopback design is a key feature of the INDI Golf StingRay TT SCOOPBACK Wedges.
